

Remove Complexity and Take Control of Your Integration

In a business environment where growth is fueled by new markets, new lines of business, mergers, and acquisitions, companies are faced with the daunting challenge of how to support growth while managing a complex data communications infrastructure. Enterprise integration enables you to get your data under control with the governance and security you require, while also supporting the scalability and reliability needs of your business. The Cleo Harmony® enterprise-scale solution ensures the security and visibility of end-to-end information integration flows necessary to meet compliance and regulatory requirements. It also enables 100% uptime and seamless integration of disparate systems to ensure your IT infrastructure can adapt and grow with the business.

With the Cleo Harmony solution, you can:

- Reliably deliver and manage your data flows via secure, multi-industry protocols.
- Govern and secure your data to meet regulatory, industry, and partner compliance requirements, making sure your system and business are always ready for an audit.
- Help drive 100% uptime with scalability, high availability, and load balancing.
- Enable pro-active responsiveness and improved decision making through enhanced dashboards.
- Stay on top of system health and receive alerts based on system performance or partner metrics, such as Service Level Agreements (SLAs), Key Performance Indicators (KPIs), and trading partner scorecards.
- Enable real-time integration with a variety of internal systems (ERP, ESB, legacy EDI, applications, cloud solutions, etc.) because the Cleo Harmony solution is vendor- and technology- agnostic and supports a wide variety of communications protocols.

Move View Act®

Most integration solutions in the marketplace focus exclusively on moving the data. With the Cleo Harmony solution, you also get the ability to view and act on the data that runs your business, increasing efficiency and eliminating downtime. You can monitor and track performance metrics from both an IT and business perspective, as well as act on real-time data via reports and dashboards based on your business needs. Leadership in today's information-overload mode of business requires the ability to quickly filter the right information, detect changing conditions, and predict outcomes. By putting Move View Act power to work in your company, you are enabling faster and more informed decision-making to be a critical success factor.

Adapt to Business Needs

The global market is increasingly competitive and chaotic. The Cleo Harmony solution can help provide the adaptability you need to support current and future growth opportunities by enabling a long-term, sustainable infrastructure for both enterprise and multi-enterprise integration. Whether connecting to internal systems including ERP, legacy EDI, ESB, internal applications, or various external trading communities, the Cleo Harmony solution provides the management, security, visibility, and control required to ensure that your business is always ready and able to handle new requirements. An extensive set of REST-based APIs also integrates the power of Cleo software with outside business applications to solve expanded IT and business challenges.

Enable B2B and Application Integration

The Cleo Harmony solution decreases the cost, time, risk, and complexity of enterprise and multienterprise integration via partner and community management. This helps drive 100% community adoption, increase business process and exception-handling efficiency, and deliver IT and business operations visibility to make confident critical business decisions faster than ever. The easy-to-install, easy-to-use solution allows you to rapidly comply with industry, regulatory, and customer mandates, and at the same time, rationalize your B2B and application interfaces to ensure interoperability across multiple technologies to avoid being locked into any single technology or vendor.

Easy Partner Enablement

Easy partner access can be provided via Cleo Portal — a Web portal to manage the delivery of files among internal and external entities, and among people sending updates to a system. Cleo Portal can be easily customized to reflect your brand, then deployed and accessed from anywhere to ensure the data you receive is managed end to end — securely, reliably, and on time.

The Reliability You Need

The fact is, 100% uptime is now the expectation rather than the goal. In order to ensure the availability and reliability required by your business and extended ecosystem, the Cleo Harmony solution includes high availability and load balancing to ensure that system is “always on.” It also includes Cleo System Monitor and Cleo Dashboards to deliver real-time visibility as data moves through your infrastructure.

Learn More

To keep pace with ever-expanding and growing business requirements, you need the tools that enable you to minimize the cost, time, and risk of repurposing functionality, as well as data from complex, heterogeneous systems and trading partner communities to ensure that your environment is continuously on and secure.
